Width 43 feet Depth 83 feet Height 14 feet

Description:

Beautiful double hangar setup at Glendale Muni airport. This is two 43 feet wide by 41.5 feet deep square hangars back to back that the interior wall was never built. The floor was left level. You can open both doors and taxi through. That yields a hangar that is 43 wide and 83 feet deep With doors at each end.

These hangars are on the north west side of the airport and have many features like phones (if you want them), sewer hookups, water and expanded power capabilities. The Hangar has remote door openers for the bifold doors and are insulated at the roof and doors. Floor has been epoxy coated.

It has an office with full bathroom (complete with shower and a kitchen counter with sink) installed in the center side with air conditioning in the office. Each side has large high wattage lamps. The hangar has 230 volt service and many amenities.
